

Platforms (and Usability)

Dustin Richmond
Fast Start Workshop - FCCM 2016

Our Motivation

Platforms for low power signal processing

Underwater Acoustic
Monitoring

Aerial Signal Processing

Terrestrial Video
Processing

Our Challenges

- Simplicity
- Reusability
- Composability

Why is this so hard? Does it have to be?

Composability

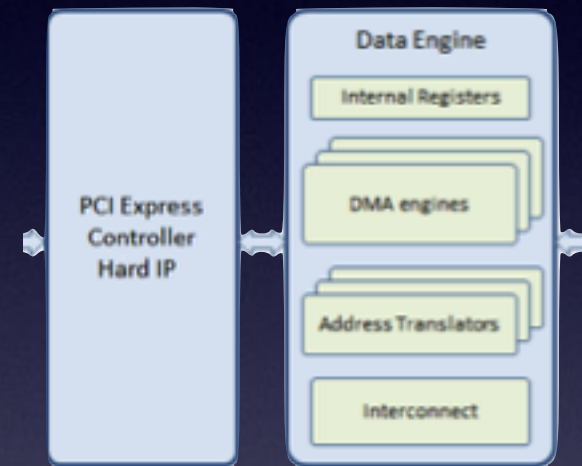

Why is Composability Hard?

User Guide

Quartus/QSys

PCIe DMA

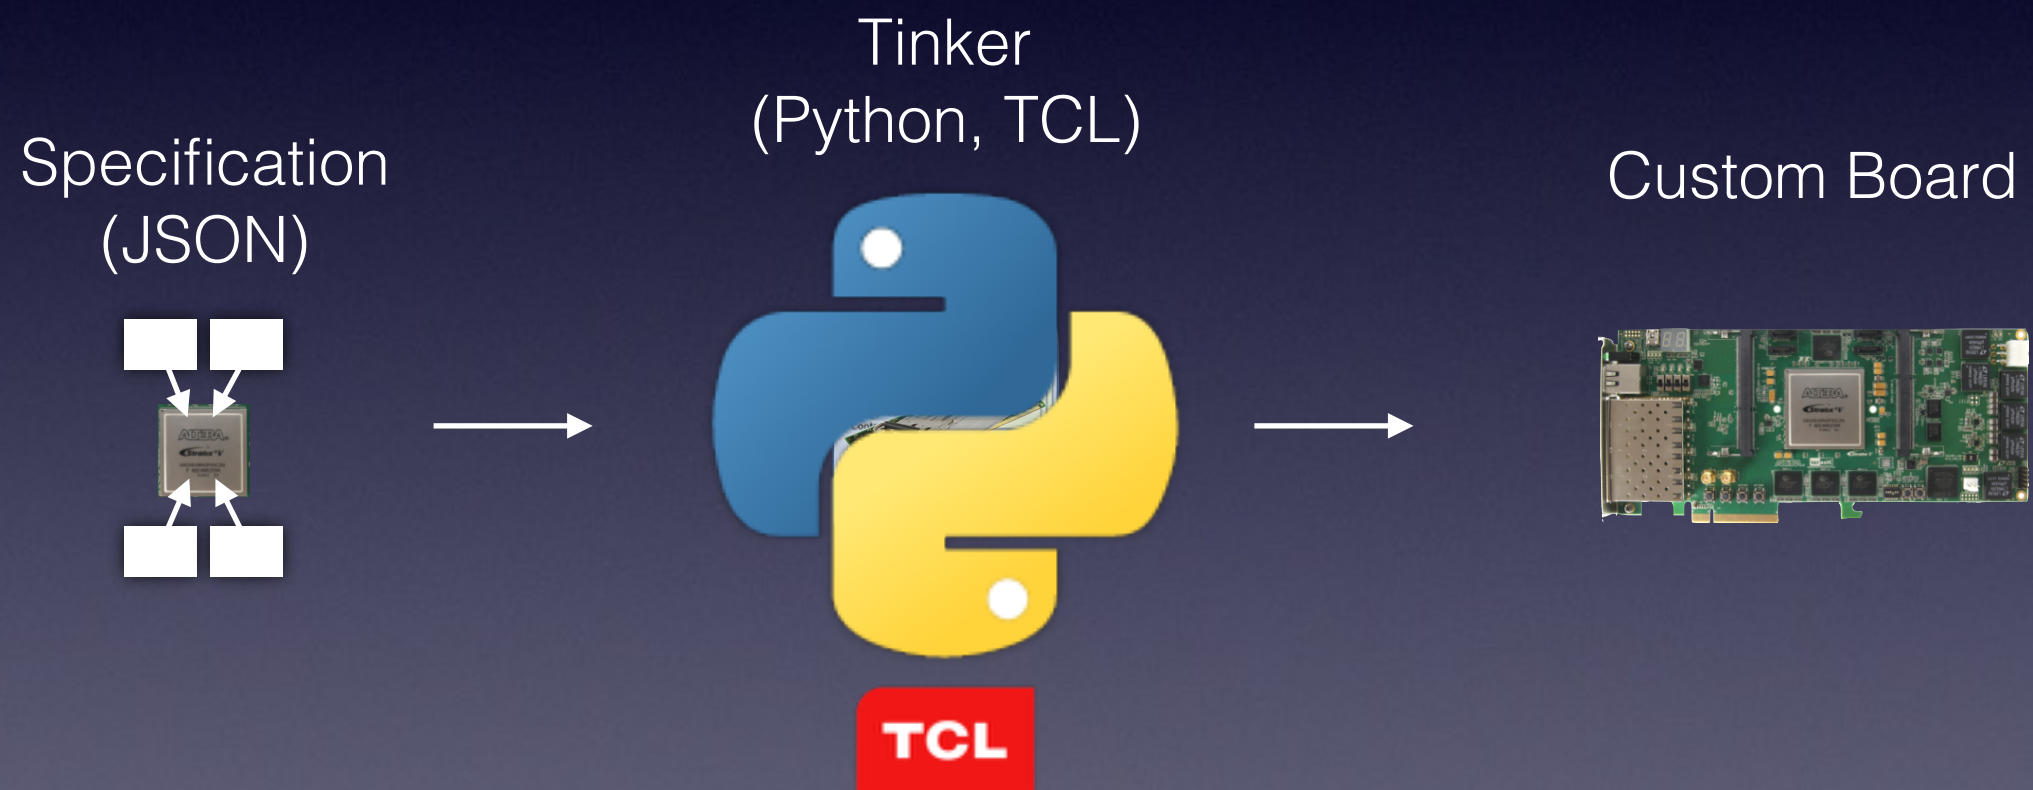

Memory Specification

Communication Protocol

Tinker - A Board Generator for OpenCL

Simplicity and Reusability

Computer Vision

Bioinformatics

Computation

$$\arg \min_{\mathbf{x} \geq \mathbf{0}} \frac{1}{2} \mathbf{x}^T \mathbf{Q} \mathbf{x} + \mathbf{c}^T \mathbf{x}$$

What does simplicity Take?

Development Board

	31	30	29	28	27	26	25	24	23	22	21	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0															
DW 0	R	Fmt	Type	R	TC	R																																									
	0	0x2	0x00	0	0	0																																									
DW 1	Requester ID										Tag (unused)										Last BE					1st BE																					
	0x0000										0x00										0x0					0xf																					
DW 2	Address [31:2]																										R																				
	0x3f4bfc10																										0																				
DW 3	Data DW 0																																														
	0x12345678																																														

PCIe Packet Format

PCIe DMA

Kernel Drivers
4 KLOC (RIFFA 2.2.1)

Hardware
24 KLOC (RIFFA 2.2.1)

Simplicity and Reusability

Reusable Integration Interface for FPGA Accelerators

riffa.ucsd.edu OR github.com/drichmond/riffa

Our Contributions

- Applications

- Users

- Tools

Tinker

$$\arg \min_{x \geq 0} \frac{1}{2} x^T Q x + c^T x$$

RIFFA
